Decimal levels are computed here as integer level completed + ((N finished to next bit level + 1) / (next level + 1)), ~piece-wise linear interpolation between integer levels, for graphing purposes, which is NOT the same as the standard OBD xx.y(or yy) representation. (I've included level 26 here because the high SP/DP ratios of recent NVIDIA GPUs > 32:1 suggest going to 92 bits TF for gigadigit candidates)
